Technologically advanced paper towel for superior hand drying and environmental benefits

AIRFLEX[®] paper towels absorb water up to 20 times faster than conventional paper towels for more effective drying. Cutting cost in use and reducing consumption.

Up to 50 per cent stronger when wet, so they dispense more easily and don't break up in user's hands, improving hygiene and washroom performance.

Softer and whiter, with a more luxurious texture, AIRFLEX[®] paper towels require fewer resources to manufacture and are suitable for recycling.

All AIRFLEX[®] towels are from independently audited sources incl. Greenpeace approved FSC, which guarantee sustainable forestry management.

We strive to use less of the world's resources so there's more left for the future.
